

## Traits and alleles relevant for breeding and genetics:

last update December, 14th 2012

Associated markers, their chromosomal localisation, and the donor genotype/species are given. Chromosomal position of a trait/allele is given in megabases according to the 12 x genome sequence of PN40024 (<http://www.genoscope.cns.fr/vitis>). The symbols were discussed at the International Conference on Grapevine Breeding and Genetics at Geneva August 1 - 5, 2010 and assigned. Follow up information on naming of loci will be provided on VIVC to avoid homonyms.

For updating information please contact: reinhard.toepfer@jki.bund.de.

Symbol	Trait/Allele	Associated marker	Chromosome	Position on chromosome [Mb]	Parent 1	Parent 2	Population size	Genotype of origin	Original species trait/allele derived from?	Reference	Comment	
<i>Be size</i>	berry size (berry weight)	SCC8	18	25.9	MTP2223-27	x MTP2121-30	139		<i>V. vinifera</i>	Doligez et al. (2002)	Only one major QTL for berry size is indicated. There are several other QTLs described in the literature.	
		VMC7f2	18	26.9	Dominga	x Autumn Seedless	118			Cabezas et al. (2006)		
					Ruby Seedless	x Thompson Seedless	144			Mejia et al. (2007)
